### **Oroville Dam Auxiliary Spillway Incident**

- Flow from the flood control spillway will be reduced from 40,000 cubic feet per second to zero.
- As flows are reduced, DWR will monitor the status of the dam, spillways, and related structures to ensure their continued safety and stability.
- Flow to the Feather River will be reduced gradually to minimize risk to downstream levees per the Army Corps of Engineers operational requirements.
- This flow reduction in the river will be buffered by the Hyatt Powerplant, Diversion Pool, Thermalito Forebay, and the Thermalito Afterbay to a final flow of 13,000 cubic feet per second.

On 04/07/17 at 1640 hours, the California State Warning Center (CSWC) received notification from DWR advising that at 1900 hours, they were increasing flow to the Feather River. Flow in the Feather River low flow channel through Oroville increased. Thermalito Power Plant also increased from 9,000 cfs to 13,000 cfs. The Oroville Dam spillway remained at 0 cfs.
